

Navyakosh Bio-Fertiliser For Tobacco

LCB Fertilizers integrates biotechnology, nanotechnology, and chemical engineering to develop unique, crop-specific fertilizers.

Our fertilizers are formulated using microorganisms, nanoparticles, and biopolymers to:

- Reduce farming investment and irrigation demand
- Increase crop yield
- Enhance soil microbial count and organic matter

BENEFITS:

- 48% reduction in agricultural investment.
- 33% reduction in demand for irrigation.
- It contains 9 factors (N, P, K, C, Zn, S, Fe, Cu, Mn).
- Active microorganisms and superabsorbent biopolymers.
- 5-8% reduction in crop duration cycle.

NUTRIENTS REQUIRED

- Nitrogen(N)
- Phosphorus(P)
- Potassium(K)
- Calcium(Ca)
- Magnesium(Mg)
- Sulphur(S)
- Zinc(Zn)
- Iron(Fe)

MAJOR MICROBES:

- Mycorrhiza (VAM).
- Phosphate solubilizing bacteria. (PSB)
- Azospirillum.
- Azotobacter
- Potassium Mobilizing Bacteria(KMB).
- Trichoderma

HOW TO USE:

- Use a total of 200 grams per plant during the crop cycle.
- Apply 100 grams per plant at the base during seedling transplantation.
- Apply the remaining 100 grams per plant at the base 40-45 days after transplantation, after weeding.
- Apply in two doses only for best results throughout the crop cycle.
- Number of bags required depends on crop density and plant population.
